G.W. Mitchell Construction

EXPERTISE

Conditions Assessment
Space Planning & Design
Interior Design
Equipment Coordination
Contract Administration

PROJECT DESCRIPTION

At the recommendation of the general contractor, Acuform was engaged to provide professional design services for a Class A ophthalmology practice specializing in Lasik screening and consultations. The owner acquired a former furniture store located on a compact parcel in San Antonio's Alamo Heights neighborhood.

The project involved extensive structural, cosmetic, and exterior renovations, transforming the building's façade to better reflect the modern medical use and enhance its presence in the community. Inside, the mechanical, electrical, and plumbing systems were completely replaced and carefully coordinated to meet the specialized requirements of a healthcare facility. Acuform led the collaboration among consultants to ensure seamless integration of all building systems, supporting clinical workflows, patient comfort, and compliance with health standards.

“Acuform and your team were a pleasure to work with. The space plan and the exterior design accurately reflects our business model. We only wish we had worked with Acuform sooner.”
- Craig Lannom, Executive Director
