February, 2026

OWNER
Jordan Ford

ARCHITECT OF RECORD
Acuform Architecture

CONTRACTOR
G.W. Mitchell Construction

EXPERTISE
Site Planning & Design
Image Program
Fast Track Design
Equipment Coordination
Contract Administration

PROJECT DESCRIPTION

Acuform has enjoyed a long-standing relationship with Jordan Ford, providing design expertise for various projects over the years. When Ford introduced a new image program to support its expanding commercial vehicle lines, Jordan Ford turned to Acuform for architectural and engineering services to bring this initiative to life.

The project called for a dedicated commercial truck service facility to expand Jordan Ford's offerings and strengthen their ability to serve fleet and commercial customers. With the dealership's existing site completely landlocked, Jordan Ford acquired a nearby infill parcel to accommodate the new facility. Acuform developed a site plan that successfully fit the program requirements onto a uniquely wide but shallow parcel, ensuring the new building could fully support Ford's commercial service standards while positioning Jordan Ford for continued growth.

“Acuform came up with a simple and cost-effective solution giving us greater confidence to move into this new market focused exclusively on commercial trucks.

- Mike Trompeter
